

Chenyu Data Analysis Outline JUN 16

SECTION 1 – WHAT BIG THEMES SHAPE THE CORPUS?

Why it matters: If we can sort the prompts into clear thematic clusters (e.g., coping with anxiety, reigniting passion, lifestyle change), we'll know which needs the corpus serves best—and where new material might be needed.

1. After clustering the prompts, how many distinct themes emerge? _____ clusters.
2. List each cluster's name, a one-sentence description, and its share of the total corpus:
 - Cluster 1: _____ (_____ %)
 - Cluster 2: _____ (_____ %)
 - ...
3. Give two representative prompts for every cluster:
 - Cluster 1 examples: _____ / _____
 - Cluster 2 examples: _____ / _____
 - ...

SECTION 2 – WHICH TOPICS SURFACE MOST OFTEN?

Why it matters: Topic-model keywords reveal the hidden vocabulary that ties prompts together, pointing to the emotional and cognitive "hot spots" writers will notice first.

4. After running topic modeling (e.g., LDA), list the top keywords for each topic in rank order:
 - Topic A: _____, _____, _____ ...
 - Topic B: _____, _____, _____ ...
 - ...

SECTION 3 – WHICH PROMPTS KEEP COMING BACK?

Why it matters: The most frequently repeated ideas show what resonates strongly enough to be phrased again and again. Knowing them helps us decide whether to lean in—or diversify.

5. List the ten most common prompt ideas (paraphrases allowed) and note their frequencies:
 1. _____ (_____ occurrences)
 2. _____ (_____ occurrences)
 - ...
6. Expand the list to the top thirty if feasible; rank them the same way.
7. For each of these popular prompts, indicate the cluster from Section 1 in which it belongs.

SECTION 4 – WHEN DO PROMPTS PLACE US IN TIME?

Why it matters: Time anchors change reflection. Understanding the dominant time frame tells us whether people are urged mainly to look back, stay present,

or plan ahead.

8. What percentage of prompts contain an explicit time frame (e.g., "last week," "next month")? _____ %.

9. Among all explicit references, which single time frame is mentioned most often? _____ (_____ %).

- Provide the next two runners-up if any: _____ (_____ %), _____ (_____ %).

SECTION 5 – WHAT NUMBERS SHOW UP THE MOST?

Why it matters: Asking for "three things" feels different from "ten things."

Popular counts hint at how much effort the prompt designers expect.

10. Whenever a prompt asks for a number of items, list every number mentioned and rank them by frequency:

1. _____ (_____ occurrences)
 2. _____ (_____ occurrences)
 3. _____ (_____ occurrences)
- Continue as needed.

SECTION 6 – WHICH VERBS DRIVE THE ACTION?

Why it matters: The leading verbs (e.g., "reflect," "remind," "inspire") show how actively the prompt guides the writer—whether it nudges, commands, or invites.

11. Identify the single most frequent verb across all prompts: _____ (_____ occurrences).

12. List the next four most common verbs and their counts for context:

- _____ (_____ occurrences)
- _____ (_____ occurrences)
- _____ (_____ occurrences)
- _____ (_____ occurrences)
